

SYNTHETIC QA DOCUMENT

NOT PRODUCT CERTIFICATION - LOCAL PROPOSAL ONLY

Fictional software QA data; not a commercial product or manufacturer statement. No performance, certificate, warranty or sales claims. Unassessed. App publication: zero.

One family / three outputs / four documented combinations

Output	QA combination	Test label	Width mm	Length mm
qa-pres-a	qa-pres-a1	Slate	600	600
qa-pres-a	qa-pres-a2	Sand	600	600
qa-pres-b	qa-pres-b1	Slate	600	600
qa-pres-c	qa-pres-c1	Sand	600	600

Dimensions are arbitrary QA inputs. Output grouping tests software routing only. The same approved illustration is a parent fallback for all three outputs. No exact appearance, material or edge identity is asserted.

Five shared authored occurrences

qa-card-width / Nominal QA width

600 mm is a fictional serializer input, not a commercial product specification.

qa-card-repeat / QA output label check

Confirm the QA output label.

qa-card-unknown / Optional QA marker not supplied

The fixture intentionally supplies no optional QA marker. Keep the observation not_found without a value.

qa-instruction-1 / Software QA instruction 1

Open the fictional output record.

Confirm the QA output label.

Keep the original occurrence identifiers.

qa-instruction-2 / Software QA instruction 2

Reopen the saved fictional record.

Compare its exact test variant rows and source-qualified notes.

Do not treat this as real product installation guidance.

Deliberate reference-note conflict

qa.reference_note = PDF-NOTE-BETA

HTML-NOTE-ALPHA is the separate HTML value. Both are intentional test strings. Preserve both anchors and conflicting_evidence; no preferred value.

Original document and absence

This one-page PDF applies to qa-pres-a, qa-pres-b and qa-pres-c. Optional QA supplement is intentionally not supplied: no file URL, no bytes, no HTTP claim. This available original is separate from that unavailable reference.
